

Browns Calf Rearer Pellet

During the early stages of a calf's life it is essential that it gets the best start to life possible. To ensure good animal performance for the rest of their life, it is important that they are fed a diet which will meet nutritional requirements.

Browns Calf Rearer Pellets are a high protein, high energy, low fibre quality ration which is both palatable and nutritious.

Browns Calf Rearer Pellets contains Bovatec[®] which is used in the prevention of coccidiosis. Coccidiosis is a condition which attacks the gut wall of the young calf severely reducing calf performance and delaying efficient rumen development. They also contain a blend of carbohydrates and high quality proteins that are readily fermentable.

When consumption of concentrates reaches 0.8 - 1.0 kg/day calves can then begin weaning.

Browns recommends maintaining a regular drench and vaccinating program in order to maximize growth rates. Clean drinking water should be provided at all times, along with good clean straw.

WHAT ARE THE INGREDIENTS AND SPECIFICATIONS?

Analysis	(DM Basis)
Nutrient	Amount
Crude Protein (Min.)	21%
Metabolisable Energy (min.)	12.5%
Starch (min)	40%
Crude Fat (max)	4.0%
Magnesium (min)	0.18%
Calcium (min.)	1.2%
Phosphorus (min.)	0.6%

Ingredients From:

Wheat, Barley, Canola Meal, Soybean Meal, Pea Pollard, Mill Mix, Lime, Salt, Canola Oil, Acid BufTM, Vitamin & Mineral Premix & Bovatec
