

Browns Lead Feed Mix

Browns lead feed is a grain based ration specifically formulated to be fed three weeks prior to calving. This ration will help to meet the calcium and magnesium demands placed on the cow post calving. A transition feeding program is one of the most important nutritional strategies available to the modern farmer.

Browns lead feed contains anionic salts in order to balance the DCAB of the diet and will assist in the prevention of metabolic disorders such as milk fever. Browns lead feed also contains Diamond V XPC to help improve feed utilisation resulting in enhanced production.

Recommended Feed Rate:

3 kg + / h / Day

Talk to Browns Nutritional Team to help you develop a fully balanced transition feeding program for your farm.

WHAT ARE THE INGREDIENTS AND SPECIFICATIONS?

Analysis	(DM Basis)
Nutrient	Amount
Crude Protein (Min.)	19%
Metabolisable Energy (min.)	12%
Starch (min)	42%
Crude Fat (max.)	2.2%
N.D.F (min)	14%
Max. Salt	2.2%
Calcium (max.)	1.0%
Phosphorus (min.)	0.5%

Ingredients From:

Wheat, Barley, Lupins, Peas, Maize, Canola Meal, Diamond V XPC, Vitamin & Mineral Premix, Canola Oil
