

# BROWNS STOCKFEED

PTY. LTD.

## LEAD FEED MIX

**Browns Lead Feed Mix** is a high protein, high energy ration designed to be fed to pregnant cows 2-3 weeks prior to calving to enable them to meet the demands placed on them post calving. Lead feeding cows in the transition period can greatly improve animal health and productivity. Lead feeding cows during this crucial period physically prepares the cow and the rumen for change from a dry state to a lactating one. This will effectively increase feed intake, which as a result will increase milk production and reduce weight loss.

Our Lead Feed mix contain Anionic Salts to assist in balancing the dietary cation/anion balance or DCAD of the diet. Anionic salts assist in the prevention of most post calving metabolic disorders such as milk fever and retained placentas by increasing blood calcium levels at point of calving. Ideally cows should be fed either half the amount of bail fed or at least 3kg/day.

### Recommended Feed Rate:

3kg/H/Day

Talk to our Browns Stockfeed Nutritional Team to help you develop a fully balanced transition feeding program for your farm.

### Ingredients From:

Wheat, Barley, Lupins, Peas, Maize, Canola Meal, Sugar, Anionic salt premix combined with Vitamin & Minerals, Diamond VXCP, Canola Oil.

NUTRIENT	AMOUNT
Crude Protein (min)	19%
Metabolizable Energy (min)	12%
Starch (min)	42%
NDF (min)	14%
Crude Fat (max)	2.2%
Salt (max)	2.2%
Calcium (max)	0.6%
Phosphorus (min)	0.5%
DACD	-2289

**PLEASE NOTE:** Not to be fed to any other classes of livestock eg; Horses, Alpacas, dog, goats, and chickens. Non Ruminant Species. As it may be FATAL. Do not feed to lactating cows, For more Information and assistance please feel free to call Browns Stockfeed 03 5662 3199
