

BROWNS STOCK FEED

PTY. LTD.

MULTI SPECIES MIX

Multi Species Mix has been formulated to allow hobby farmers who have multiple animal species on their property to feed a mix that can be used safely for all. It is a general purpose mix and if used correctly is a useful addition to the diet to maintain/assist live weight gain.

This mix is a blend of rolled barley, rolled wheat (in equal amounts) with 20% rolled corn added to assist body condition in cattle, pigs, poultry and sheep primarily. Multi species mix is designed to be fed at 2-4 kg to adult cattle in conjunction with adequate levels of pasture and hay.

It is not designed to be fed ad lib in large amounts with no pasture available. For smaller ruminants like sheep and goats the amount must be adjusted to fit bodyweight, i.e. a 40 kg sheep should only receive about half to 1 kg a day along with plenty of pasture or hay to avoid acidosis in smaller animals. The protein level is not suitable for young calves as they need 18% protein and are better serviced by using Browns Calf Rearer or heifer grower mix.

Ingredients From:

Wheat, Barley, Maize & Canola Oil.

NUTRIENT	AMOUNT
Crude Protein (min)	11.27%
Metabolizable Energy (min)	14.10%
Starch	66.26%
NDF	11.15%
Dry Matter	90.93%

PLEASE NOTE: Multi species mix has NOT been designed to be fed to horses as it contains wheat which can cause issues in equines due to the fast fermenting nature of the grain.

For more Information and assistance please feel free to call Browns Stockfeed 03 5662 3199
